

# ARCH 264 – Building Science

## Lecture 1

### Why worry about Building Science?

# Historical Buildings and Landmarks

Santa Maria del Fiore, Florence

Monticello, Virginia

Falling Water, Pennsylvania

Campo Volantin, Spain

# Homes

# Utility Buildings

Plastic Garden Shed

|              |                       |
|--------------|-----------------------|
| Retail Price | \$800.00 /unit        |
| Annual sales | <u>x 10,000 units</u> |
| Revenue      | = \$8,000,000         |

# Manufacturing Buildings

Toyota Assembly Plant,  
Cambridge

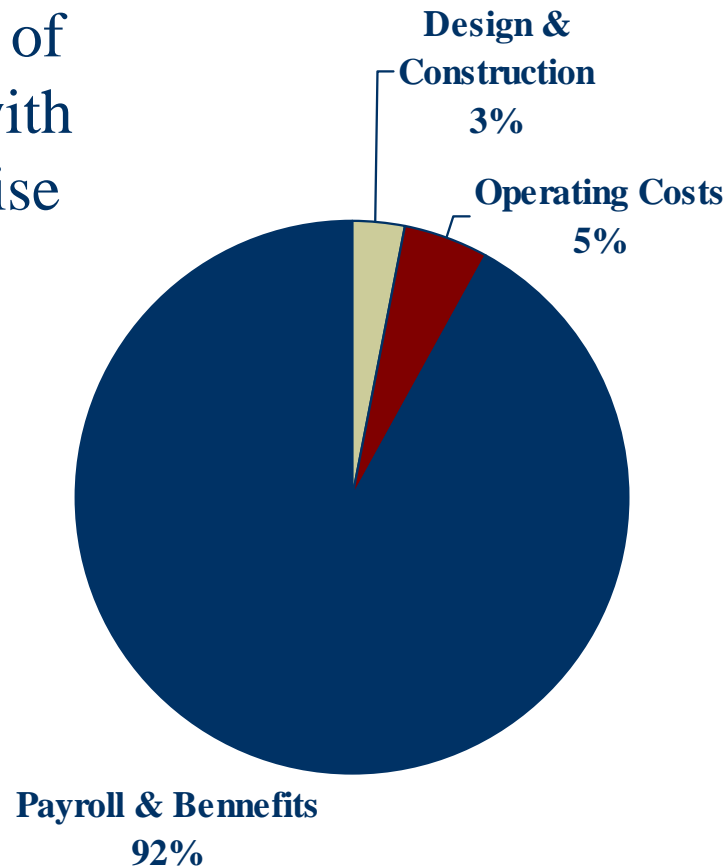

- 2.8 million sq. ft.
- \$2.57 billion investment
- 2,800 employees
- \$212 million payroll

|              |                         |
|--------------|-------------------------|
| Production   | 220,000 units/yr        |
| Retail Value | x <u>\$20,000 /unit</u> |
| Revenue      | \$4.4 billion           |

# Office Buildings

Net present worth of costs associated with operating a high rise office building

# The impact of buildings on Health & Productivity

- ◆ Typical North Americans spend 90% of their lives *in* buildings
- ◆ Building related illnesses account for \$60 to \$400 Billion of lost productivity in the US
- ◆ Lockheed & Boeing
  - Daylighting retrofit results in 15% drop in absenteeism and 15% productivity gain
  - Lighting retrofit results in reduction in defects and improved delivery time

- 
- ◆ US post office, Reno
    - Lighting retrofit results in increased sorting speed and accuracy
  - ◆ VeriFone
    - Building retrofit to add windows, non-toxic materials & improved ventilation system results in 45% decrease in absenteeism
  - ◆ Wal-Mart's "Eco-Store"
    - Experimental building using conventional lighting in 1/2 and daylighting in other 1/2
    - Tracking indicates higher sales on daylit side

# Medical costs associated with building related illnesses

- ◆ Indoor Air Quality issues
  - Mould
  - Contaminants
  - Allergies
  - Headaches
  - Asthma

# Medical costs associated with building related illnesses

- ◆ Cost to society
  - Treatment
  - Disability
  - Retraining

# Buildings as Capital Investment

1997 Capital Expenditures  
on Building Construction  
in Canada = \$55 Billion

# Buildings as Capital Investment

| Canadian Housing Stock Statistics - 2000 |            |
|--|------------|
| Total Stock                              | 11,908,049 |
| Owned                                    | 7,491,208  |
| Rented                                   | 4,416,837  |
| Occupied                                 | 11,364,149 |
| Owned                                    | 7,184,901  |
| Rented                                   | 4,179,253  |
| Vacant                                   | 543,896    |
| For Sale                                 | 306,310    |
| For Rent                                 | 237,586    |

# Buildings as Capital Investment

## Survey of Canadian renovation & repairs expenditures for 1999

| Total Expenditures     | Total Homeowner Households | % Reporting Expenditures | Average Expenditure |
|------------------------|----------------------------|--------------------------|---------------------|
| Period of construction | 7,516,620                  | 65.2                     | \$1,810             |
| Before 1946            | 1,073,830                  | 66.5                     | \$2,250             |
| 1946-1960              | 1,067,590                  | 68.6                     | \$1,870             |
| 1961-1970              | 1,044,460                  | 67.3                     | \$1,900             |
| 1971-1980              | 1,686,290                  | 67.9                     | \$1,869             |
| 1981-1990              | 1,407,260                  | 66.7                     | \$1,695             |
| 1990 and after         | 1,082,630                  | 55.1                     | \$1,407             |
| Not stated             | 154,560                    | 44.4                     | \$966               |

# The impact of Buildings on the Environment

- ◆ N.A. construction waste accounts for 15-40% of the total materials sent to landfill

| Typical Residential Construction Waste (lbs/sq. ft.) |             |
|--|-------------|
| Wood   | 1.3 – 2.1   |
| Drywall  | 1.0 – 1.2   |
| Cardboard  | 0.1 – 0.5   |
| Metals   | 0.02 – 0.13 |
| Other (Plastics, shingles, etc)                      | 0.5 – 1.3   |
| Total  | 3.0 – 5.2   |

# The impact of Buildings on the Environment

- ◆ North American buildings use over 30% of the energy produced – more (per capita) than any other continent
- ◆ Reducing building energy use can defer or even eliminate the need to construct additional power stations

# Let someone else be the Judge

- ◆ ARCH 264 – Building Science
  - “How to make buildings that work” or
  - “How to practise architecture and not get sued”
- ◆ Approx. 30% of construction projects end up in litigation?
- ◆ The majority of these are related to problems with the building envelope and systems  
→ Building Science

# Summary

- ◆ The value of buildings
  - Historical
  - Sentimental
  - Revenue Protection / Generation

# Summary

- ◆ Buildings represent great capital investment
- ◆ Buildings use significant resources & produce large amounts of waste

# Summary

- ◆ Building deterioration, deficiency and inefficiency
  - Threatens that which we consider valuable
  - Increases resource use and waste production

# Website
