Lake of the Woods and Rainy Lake Conditions Update - June 19, 2014

Disclaimer: These estimated forecasts are not intended to give exact water elevations and should only be used as a guide. There is large uncertainty associated with forecasted inflows and lake levels as meteorological conditions can change rapidly and computer models are never completely accurate.

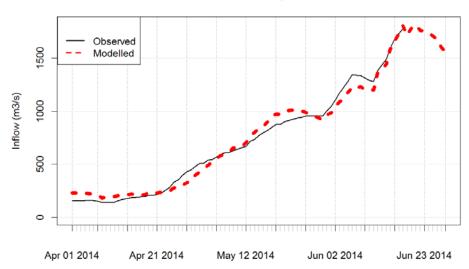

Rainy Lake

Inflows into Rainy Lake are expected to reach approximately $1800 \text{ m}^3/\text{s}$ (64,000 ft³/s) around June 21^{st} before beginning to decline. Rainy Lake water levels are expected to rise 30-45 cm (12-18 in) over the next 7 days. Water levels will likely continue to rise beyond this period due to the extremely high inflows.

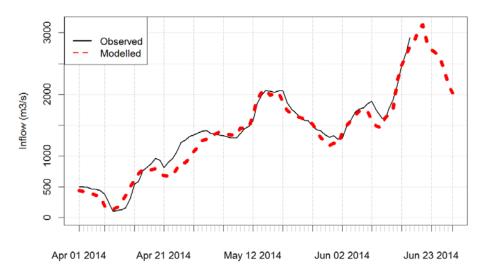

Lake of the Woods

Inflows into Lake of the Woods are expected to reach approximately $3100 \text{ m}^3/\text{s}$ ($110,000 \text{ ft}^3/\text{s}$) over the coming days before beginning to decline. Lake of the Woods water levels are expected to rise 20 - 28 cm (8 - 11 in) over the next 7 days. Water levels will likely continue to rise beyond this period due to the extremely high inflows.
